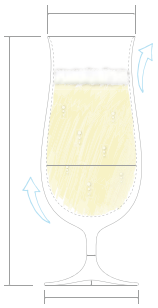
RIVERET's Features

Maintains beer's head

We developed the inward curving angle and finish of the surface specifically with beer in mind.The curve is designed to maintain and accommodate the beer's head, or foam, which functions as a lid. The longer the foam lasts, the longer it prevents the beer from oxidation. Because of that, the taste will stay nicely until the last sip.



A delicate feel

Compared to glass or pottery, bamboo is affected less by temperature changes and provides a gentle feel.Our delicate machining technology allows us to prepare material as thin as 2mm thick, which not only makes it easy to drink but also enhances the original flavor of the drink.
